

Modular Integrated Diagnostics

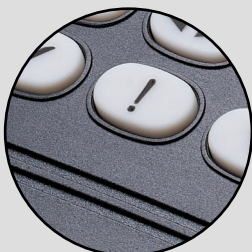

Omitec

OmiScan

The OmiScan hand-held diagnostic tool provides the service technician with a simple, easy to use scan tool capable of performing EOBd diagnostics and other vehicle specific diagnostics.

The OmiScan can be used as a stand-alone tool in or outside of the workshop environment and interfaces with the OmiTechcenter and CAPS technical workshop manual.

Main Features

- Rugged, simple easy to use handset, with clear backlit display, powered directly from the vehicle.
- Fully EOBD compliant, all petrol driven vehicles manufactured from 2000 model year must conform to this standard.
- Excellent vehicle manufacturer coverage pre 2000 model year.
- Covers Engine Management Systems and other system diagnostics such as airbag, ABS and Live Data.
- All application software contained within the handset.
- Interfaces with CAPS technical workshop manuals.

The OmiScan is a rugged designed hand-held scan tool at home in every professional technicians tool kit. Supplied in a robust storage case that also houses a separate thermal printer for use away from base. The OmiScan can be used stand-alone or as part of the OmiTechcenter integrated diagnostic workstation.

Handset

The handset has well defined soft feel buttons and is powered directly from the vehicle. The clear backlit display is easy to read and features on screen prompts.

Cables

The basic kit is supplied with a standard EOBD J1962 cable. Cables for pre EOBD vehicles and a switchable harness for additional diagnostic systems are available as optional extras or come complete with a full kit. Cables for printer, power-up and PC link are supplied as optional extras or standard with the full kit.

Coverage

The standard tool covers EOBD equipped vehicles for Engine Management Systems and may cover additional systems such as airbag, ABS, SRS, climate control, transmission depending on the vehicle manufacturer. A comprehensive range of cables supports a wide range of pre EOBD vehicles.

Functionality

The OmiScan will read and clear fault codes and when used in conjunction with OmiTechcenter and the CAPS technical workshop manual will link to suggested diagnostic test routines. The OmiScan also reads 'Live Data', captures 'Freeze Frame Data' and manufacturer test routines, whenever supported by the vehicle. The OmiScan is even CAN ready for future vehicle system developments.

Printer

A portable thermal printer is supplied as an optional extra or is included as standard in the full kit. This allows the user to print fault codes with descriptions, live data captures as 'hard evidence' for the vehicle owner. When used with OmiTechcenter the unit links to a conventional A4 printer.

Support

A full suite of application lists, user instructions and vehicle manufacturer specific manuals are supplied on CD allowing the user to view on a PC or print relevant sections as required. There is a full Technical Support Line and software updates are issued twice each year.
